

Acne Scarring

THE SCHEIBNER CENTRE

Active acne and scarring

Active acne is a heartbreaking condition. While excellent skincare products can put active acne in check, the scars from this condition can plague many. We have obtained excellent results in normalizing the scars with laser treatments. Active acne is also dramatically reduced by laser stimulation.

Many teen agers have oilier skin, due to clogged pores. Our Cleanser and Scrub products help both in normalising oily complexions and in reducing bacterial levels.

Active acne is usually triggered by stress. For those with chronic active acne, we recommend a green bentonite clay to dry it up fast! Coupled with the clarifying Gel and Stimulating cream, active acne is normalised very quickly.

Those who have had severe acne, usually have some scarring, and skincare will not help, so it is important to prevent acne early. The good news is, if you have these scars, we can help!

Questions regarding Acne

Q: How do I get rid of my acne?

A: There are many acne products on the market and some work fairly well. We have been helping people get rid of their acne for twenty five years. We have developed some really excellent skin care products to get rid of active acne.

We recommend a combination of several products:

- For oily skin, you need to get Cleanser and Scrub which will help normalise your complexion and unclog pores.
- For active acne outbreaks, use the Clay Masque (a green bentonite clay) to dry it up quick! This should be followed by a combination of Moisturiser, Cleanser, Clarifying Gel and Stimulating Cream. To learn more about these products see www.skincareonline.com
