"I have lost 9 cm off the circumference of each upper arm and about 15 cm off my abdomen. This occurred over about 4 months. It took approximately 8 one-hour sessions every 2 weeks. The treatments are not only painless but actually feel pleasant. They consist of the application of a number of different machines, which burst the fat cells so that the fat contents are released back into the blood circulation and can be used up by the body. Using passive or active exercise this liquefied fat can be used up. Additional treatments are then applied to tighten and refine body skin.

This also improves the appearance of cellulite and accelerates improvement in the appearance of stretchmarks and generally loose or sun damaged skin. It is never too late to get a second chance. The treatments have improved my overall sense of well being which is no doubt due to the release of endorphins. Losing all this weight also has a beneficial effect on the cardio vascular system which does not have to work as hard. It is definitely healthier to weigh less and be more fit."
