

Unique Laser Treatments

THE SCHEIBNER CENTRE

Eternally Young™ Treatments

Albert Einstein first conceived of lasers in 1917. The word LASER is an acronym for Light Amplification by the Stimulated Emission of Radiation. Lasers were originally used in dermatology to treat portwine birth marks. Unfortunately because the lasers were used at very high powers in those days, they also created additional scarring in the process.

Dr Adrianna Scheibner first started using laser light at Sydney Hospital in 1980 under the direction of Professor William McCarthy, who established the first medical laser unit in Australia.

One day in trying to help a patient who had come to treat a portwine birthmark, but also had a minor cosmetic problem, Dr Scheibner intuited a gentler laser method which eliminated all scarring. She has since further pioneered the use of extremely low

level laser light to rejuvenate skin without additional scarring, or pigmentation problems commonly associated with traditional laser resurfacing. EternallyYoung Laser Treatment™ is truly a unique treatment method and device, both are patent pending.

The lasers used are specifically set up to deliver laser light deep into the dermis and actually “melt” and stimulate the collagen layer by raising its temperature to about 50°C to 65°C without destroying the upper layers of the skin. This eternally young treatment uses very low energy and a very delicate application method, so the treatment takes enormous skill and several hours to perform. The results,

Before and after eternally young laser treatment, the sun damage is noticeably better, sun damage spots nearly vanish, skin quality improves. The overall effect is one of appearing to lose about ten years of aging.

however are uniquely effective and (unless the skin is accidentally or purposefully interfered with during the healing process) the skin heals nearly perfectly, looking noticeably younger, smoother and firmer over time.

Heal thyself. Literally.

In all healing, the genetic code in the cells acts as a blueprint which the body uses as an ideal by which to heal itself. The laser light when used in this unique non-invasive manner acts as a trigger for this healing process. Because it uses the body's own collagen and elastins, the results are subtle and completely natural, reversing the effects of time and sun damage to a great degree. The skin continues to improve even nine to twelve months after the treatment. It is a subtle gradual change, but the end results can be quite dramatic. The forever young treatments are suitable for women and men of all ages. In the young (people in their twenties) as preventative and in the older age groups for the purpose of reversing sun damage and signs of aging.

Before and after laser treatment. The unique eternally young method allows treating of necks and body skin previously untreatable by lasers.
