

Pigmentation Treatments

THE SCHEIBNER CENTRE

About Pigmentation

Pigmentation problems occur as a result of sun damage to skin. The body tries to protect itself from ultraviolet radiation by producing melanins which is the brown pigment in skin. The fairer and thinner the skin the more likely UV exposure will cause damage.

When this effect occurs evenly, it is known as the much coveted suntan. However the uneven manifestations of this are freckles and age or sun spots. To learn about what happens to your skin during sun exposure, see the acne rosacia/sundamage pdf.

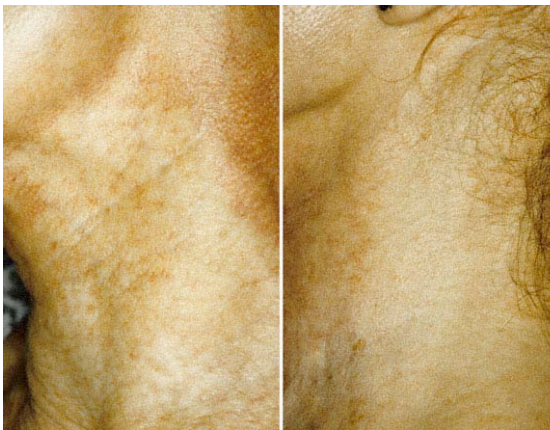

Vitiligo is a loss of pigment cells (the opposite of the tanning process) and is often preceded by emotional or physical stress such as sunburns. This condition is treatable by gentle laser stimulation, however requires numerous treatments over an extended period of time.

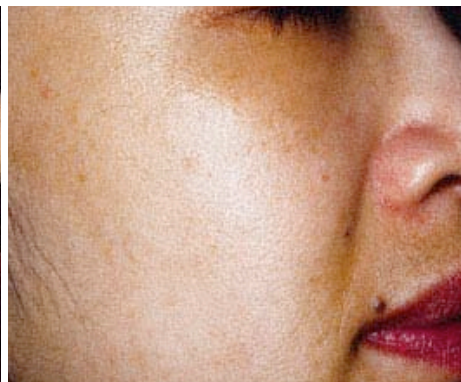

Vitiligo is treatable by laser light

This patient suffered pigmentation loss due to having resurfacing, after repeated treatments, it is substantially better.

Pigmentation problems are usually an uneven distribution of melanins (freckles, sunspots) which is the skin's way of protecting itself from the UV radiation of sun exposure. What these unique laser treatments do is even things out closer to normal skin coloring. It also helps reduce wrinkles.

These photos were taken nine years apart. Note reduction in pore size, lack of appearance of aging.

Questions and Answers about pigmentation

Q: I have been told by specialists that in my case there is nothing to be done. Can you help?

A: We have helped a lot of people who were told their case is beyond help. There is no guarantee of success, of course, but we have had very good resolution in a lot of such cases. It is best to schedule a consultation to ask questions in person.

Q: Is this treatment laser resurfacing?

A: No. In fact some of the pigmentation cases we treat are from people who have had laser resurfacing done by others. This is a very gentle and unique laser treatment that does not destroy the upper layer of skin unlike some laser treatments.
